## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 8-12, drawn to processes, classified in class 568, subclass 700+.
- II. Claims 13 and 14, drawn to catalysts, classified in class 502, subclass 150+.
- III. Claim 15, drawn to compounds, classified in class 568, subclass 8+.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the catalysts of Invention II could be used in other processes such as hydroformylation processes.

Inventions II and III are related as mutually exclusive species in an intermediate-final product relationship. Distinctness is proven for claims in this relationship if the intermediate product is useful to make other than the final product (MPEP § 806.04(b), 3rd paragraph), and the species are patentably distinct (MPEP § 806.04(h)). In the instant case, the intermediate product is deemed to be useful as intermediates to other catalysts such as soluble molecular weight-enlarged catalysts and the inventions are deemed patentably distinct since there is nothing on this record to show them to be

obvious variants. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions anticipated by the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Claim 15 is a Markush type claims reading on independent and distinct inventions. Members of the Markush group are so unrelated and diverse that a prior art reference anticipating the claims with respect to some of the members would not render the claims obvious under 35 U.S.C. § 103 with respect to all of the other members. Accordingly, if Group III is elected, applicants are required under 35 U.S.C. § 121 to provisionally elect a single disclosed and claimed species, i.e., a single compound. The provisional election will be given effect in event the claims are not found allowable, MPEP § 803.02.

Should applicants traverse, they should submit evidence or identify such evidence now of record showing the various species to be obvious variants. In such an instance, if the examiner finds one of the species anticipated by the art, the evidence may be used in a rejection under 35 U.S.C. § 103 of the other species.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
